## METHOD AND APPARATUS FOR SEAMLESS INTEGRATION OF IMAGES USING A TRANSMISSIVE/REFLECTIVE MIRROR

## ABSTRACT OF THE DISCLOSURE

An integrated display system includes multiple displays and a transmissive/reflective mirror with a mirror face. Images from display areas of one or more displays are passed through the mirror face and provided to a viewer. Images from display areas of one or more displays are reflected by the mirror face and provided to the viewer. The displays are arrayed to generate a seamless composite image from the images provided by the displays.
